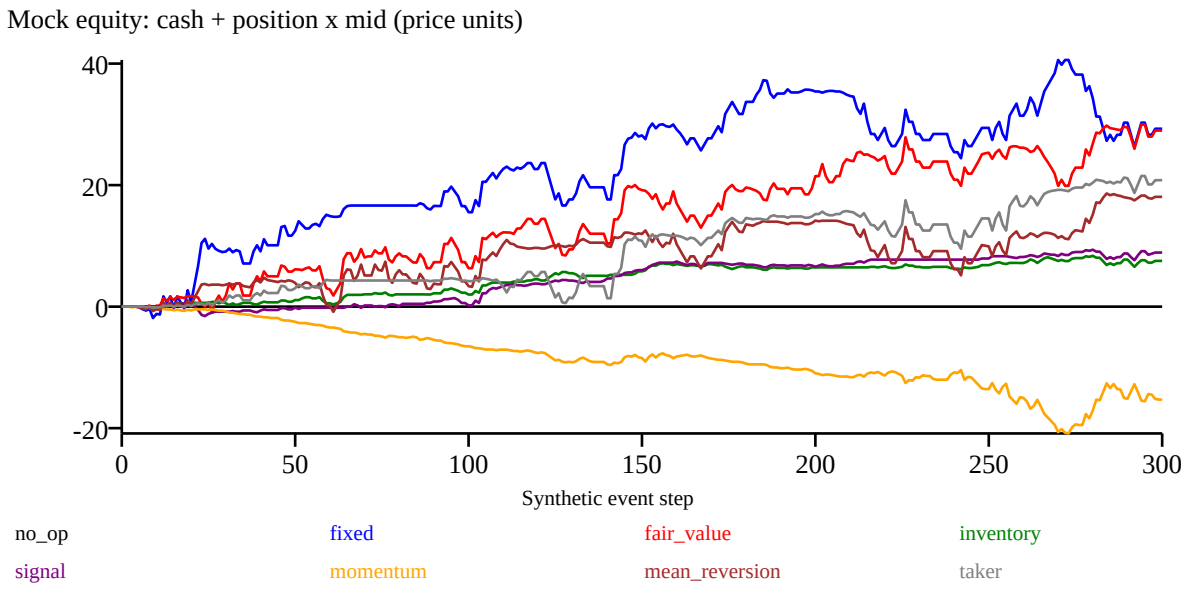
Arena Quick Insight

SYNTHETIC / EXAMPLE DATA

Run: 20261106T221002-7b7a75883e
Family: market | Seed: 7

Observed metric	Value
best_pnl	29.28
steps	300
strategies	8



Synthetic single-instrument mock exchange; not Qminers scoring or live evidence.
All strategies receive identical exogenous snapshots and aggressive trade flow.
One-event order latency; quotes cancelled after one event; partial fills capped by event volume.
Passive fills assume front-of-queue priority; no real queue information is available.
Final inventory is marked to mid; liquidation spread/cost is not included.
Cancellation acknowledgements are fill barriers; actual API ordering must be reconciled.
Best strategy is selected on this scenario, not an untouched evaluation set.

What this means

The table contains observed values from this saved run, with no invented performance estimates. Values from different metrics have different units and must not be ranked together. Synthetic comparisons demonstrate implementation and sensitivity; they do not demonstrate trading edge.

Limitations and next test

Official runtime, API, scoring and dependencies must still be checked. Use the official evaluator and legal data, compare paired seeds, and inspect worst cases. A mock fill model can materially change the ranking of strategies.
